Science enhances our culture and civilisation, improves our health and quality of life, helps solve the world's biggest problems, and supports sustainability. It influences nearly everything we do and is absolutely essential to drive economies. Science matters to us all and is one of the UK's greatest assets. We need to embrace a **New Enlightenment** to ensure that science is promoted, that there is good engagement between science and society, and that science is used most effectively for the public good.

Sir Paul Nurse FRS is currently Director of The Francis Crick Institute. His discoveries have helped to explain how cells control their cycle of growth and division. This work saw him jointly awarded the Nobel Prize for Physiology or Medicine in 2001. He served as President of the Royal Society from 2010-2015.
